1 table saw injury every 9 minutes.
10 table saw amputations every day.*

Life-Changing Consequences

Extreme Pain and Trauma
Loss of income-earning abilities
Loss of ability to pursue hobbies
Regret that lasts a lifetime

Protect Yourself

Thousands of Fingers Saved. And Counting...

Customer Comments

“ This saw would be worth its purchase price even without the brake. It's fit and finish is unparalleled. **It's truly the "Rolls Royce" of table saws.**

Chris D. – Maryland

I no longer worry that somebody will be injured using our table saws when I'm at work or away. **These table saws actually let me sleep better at night....** Priceless.

Kevin G. – Minnesota

*Source: US Consumer Products Safety Commission

It has made our school **a safer place to work and learn.** In 20 years of using table saws, these saws are the finest operating saws I have used and seen.

James K. - Oklahoma

I can't believe anyone would use anything but this saw. **I can't thank SawStop enough for having all of my fingers.**

woodworker – California

I replaced two perfectly serviceable, well known name brand saws, **all in the interest of safety and corporate responsibility.**

Vic N. – Florida

My wife said - and I quote - **"This is what I want you to get so I don't have to worry when you're downstairs".** That's all I needed to hear. Thanks again for the brake technology and a quality saw in one package.

Larry K. -Illinois

How It Works:

#1: Detect

- The blade carries a small electrical signal.
- When skin contacts the blade, the signal changes because the human body is conductive.
- The change to the signal activates the safety system.

WATCH
www.sawstop.com
VIDEO

#2: Activate

- An aluminum brake springs into the spinning blade, stopping it.
- The blade's angular momentum drives it beneath the table, removing the risk of subsequent contact.
- Power to the motor is shut off.

All this happens in less than 5 milliseconds!

#3: Reset

WATCH
www.sawstop.com
VIDEO

- **Resetting the saw yourself is easy.** Simply replace the blade and affordable brake cartridge and your saw is operational. The entire reset process takes less than five minutes.
